

Performance Examination - Asphalt

Standard Method of Test for Asphalt Binder Content of Asphalt Mixtures by the Nuclear Method (AASTHO T 287-14)

| Candidate Name: NICET ID: | | |
|--|------------|------------|
| Apparatus | Trial 1 | Trial 2 |
| Nuclear gauge | | |
| Neutron source - an encapsulated and sealed radioactive source (such as americium/beryllium) | | |
| Thermal neutron detector (such as helium-3 or boron trifluoride) | | |
| Read-out instrument | | |
| Balance Readable to 0.1 g | | |
| Oven : capable of heating to 350 ± 5 °F (177 ± °C) | | |
| Steel straightedge: approximately 18 in. (450 mm) long | | |
| Flat plate , metal (min. 10 mm thick) or wood (min. ¾ in. thick) Plexiglas (min. thick 12.5 mm) (0.5 in.) | | |
| Thermometer: Range of 50 to 500 °F (10 to 260 °C) | | |
| Spoons and mixing bowls | | |
| Apparatus necessary to prepare compacted specimens as specified in Test Methods D1559, D1561, D3387, or Practice D4013 | | |
| Molded laboratory specimen container | | |
| For 4 in. diameter specimens: container has two holes for specimens, each hole having the diameter of 10.312 cm | | |
| For 6 in. diameter specimens: container has one hole for specimens, the hole having the diameter of 15.392 cm | | |
| Length of the container is 24.689 cm | | |
| The total height of the container is 6.985 cm | | |
| Height from container bottom to specimen level is 5.715 cm | | |
| Background radiation count checked daily | | |
| Calibration curve developed according to each mix type | | |
| Correlation factor greater than or equal to 0.995 | | |
| | T = | |
| Procedures | Trial 1 | Trial 2 |
| 1. Test sample obtained according to T 168 | | |
| 2. The moisture content of the test sample determined by AASHTO T 110 or by drying the | | |

test sample to constant mass in an oven at 230 ± 9 °F (110 ± 5 °C) for no longer than two

Examiner Name: _____ Date: ____ Date: ____

3. The sample heated to $250 - 300 \,^{\circ}\text{F} \, (121 - 149 \,^{\circ}\text{C})$

Performance Examination - Asphalt

Standard Method of Test for Asphalt Binder Content of Asphalt Mixtures by the Nuclear Method (AASTHO T 287-14)

| Candidate Name: NICET ID: | | |
|--|-----------|----------|
| 4. Sample pan filled to half full, evenly distributing the sample | | |
| Procedures (continued) | Tria 1 | al Trial |
| 5. Sample leveled with a trowel or spatula | | |
| 6. Additional sample added to the pan until the mass of mix in pan equals the mass of saused for calibration | ample | |
| 7. Mass of mix in pan recorded | | |
| 8. Mixture leveled with spatula or trowel | | |
| 9. Mixture compacted with a plate until even with the top of the pan | | |
| 10. The temperature of the sample recorded | | |
| 11. The temperature within 10 °F (6 °C) of calibration temperature | | |
| 12. The sample placed in gauge | | |
| 13. Manufacturer's instructions followed to obtain sample counts | | |
| 14. Apparent asphalt content determined | | |
| 15. Corrected for moisture content, if necessary | | |
| 16. Background radiation count obtained each day before taking measurements | | |
| 17. Statistical stability test performed at least once a month | | |
| 18. Calibration curve developed according to Section 8 (for the method being presented each mix type and aggregate blend |) for | |
| 19. Correlation factor greater than or equal to 0.995 | | |
| 20. Test sample obtained according to D979 | | |
| 21. The moisture content of the test sample determined or by drying test sample to consmass in an oven at 110 \pm 5 °C (230 \pm 9 °F) | tant | |
| Method A | | |
| 22. Sample pan filled in three layers | | |
| 23. After each layer, pan lifted approx. 20 to 50 mm (1 to 2 in.) and tapped on the working surface two or three times to settle contents | ng | |
| 24. The last layer fills pan slightly above the top edge | | |
| 25. Material added or removed until the mass of mix in the pan is within 10 g of the calib sample | ration | |
| 26. Mass of mix in pan recorded | | |
| 27. Sample compressed with a flat plate until level with the top edge of the pan | | |
| 28. The temperature of the sample recorded | | |
| | | |

Standard Method of Test for Asphalt Binder Content of Asphalt Mixtures by the Nuclear Method (AASTHO T 287-14)

| Candidate Name: NICET ID |): | | | | | |
|---|---|--|--|--|--|--|
| 29. The temperature within 5 °C (9 °F) of calibration temperature unless the apparatus provision for temperature correction | makes | | | | | |
| 30. The sample placed in the chamber | | | | | | |
| Procedures (continued) | Trial Trial 1 2 | | | | | |
| 31. Manufacturer's instructions followed to obtain sample counts | | | | | | |
| 32. Asphalt content of mixture determined | | | | | | |
| 33. Corrected for moisture content, if necessary | | | | | | |
| Method B | | | | | | |
| 34. Specimens prepared using Test Method D1559, D1561, D3387, or Practice D4013 | 3 | | | | | |
| 35. Two specimens used for 10-cm (4 in.) diameter specimens | 35. Two specimens used for 10-cm (4 in.) diameter specimens | | | | | |
| 36. One specimen used for 15-cm (6 in.) diameter specimens | | | | | | |
| 37. For 10-cm specimens: the mass of the two test specimens are within 10 g of each other and the average of the two test specimens are within 10 g of the average of the calibration samples | | | | | | |
| 38. For 15-cm specimens: the mass of the test specimen is within 10 g of the calibratic sample | on | | | | | |
| 39. Sample(s) placed in the molded specimen container and then placed in the testing chamber | | | | | | |
| 40. Manufacturer's instructions followed to obtain sample counts | | | | | | |
| 41. Asphalt content of mixture determined | | | | | | |
| 42. Corrected for moisture content, if necessary | | | | | | |
| First Attempt: Pass: Fail: Second Attempt: Pass: Fail: Exam Administration: Remote In-Person Comments: | _ | | | | | |
